Figure 1 shows a line drawing and a photograph of a fossilized jawbone. The line drawing is a detailed reconstruction of the jawbone, showing the arrangement of teeth and the structure of the jaw. The photograph is a black and white image of the actual fossilized jawbone, showing the texture and color of the bone. A scale bar is provided below the photograph for reference.

Figure 1

The fossilized jawbone is a significant discovery, as it provides evidence for the evolution of the jawbone. The jawbone is a complex structure, and its evolution has been a subject of debate among scientists. The fossilized jawbone shows a structure that is intermediate between the jawbone of a fish and the jawbone of a mammal, supporting the theory of evolution.
