Figure 1 shows the dorsal view of the skull of *Protheridium* sp. The skull is elongated and tapers towards the posterior end. It features a prominent snout with a central opening (nostril) and a pair of large, rounded eyes. The mouth is wide and contains a row of small, sharp teeth. A scale bar is provided for reference.

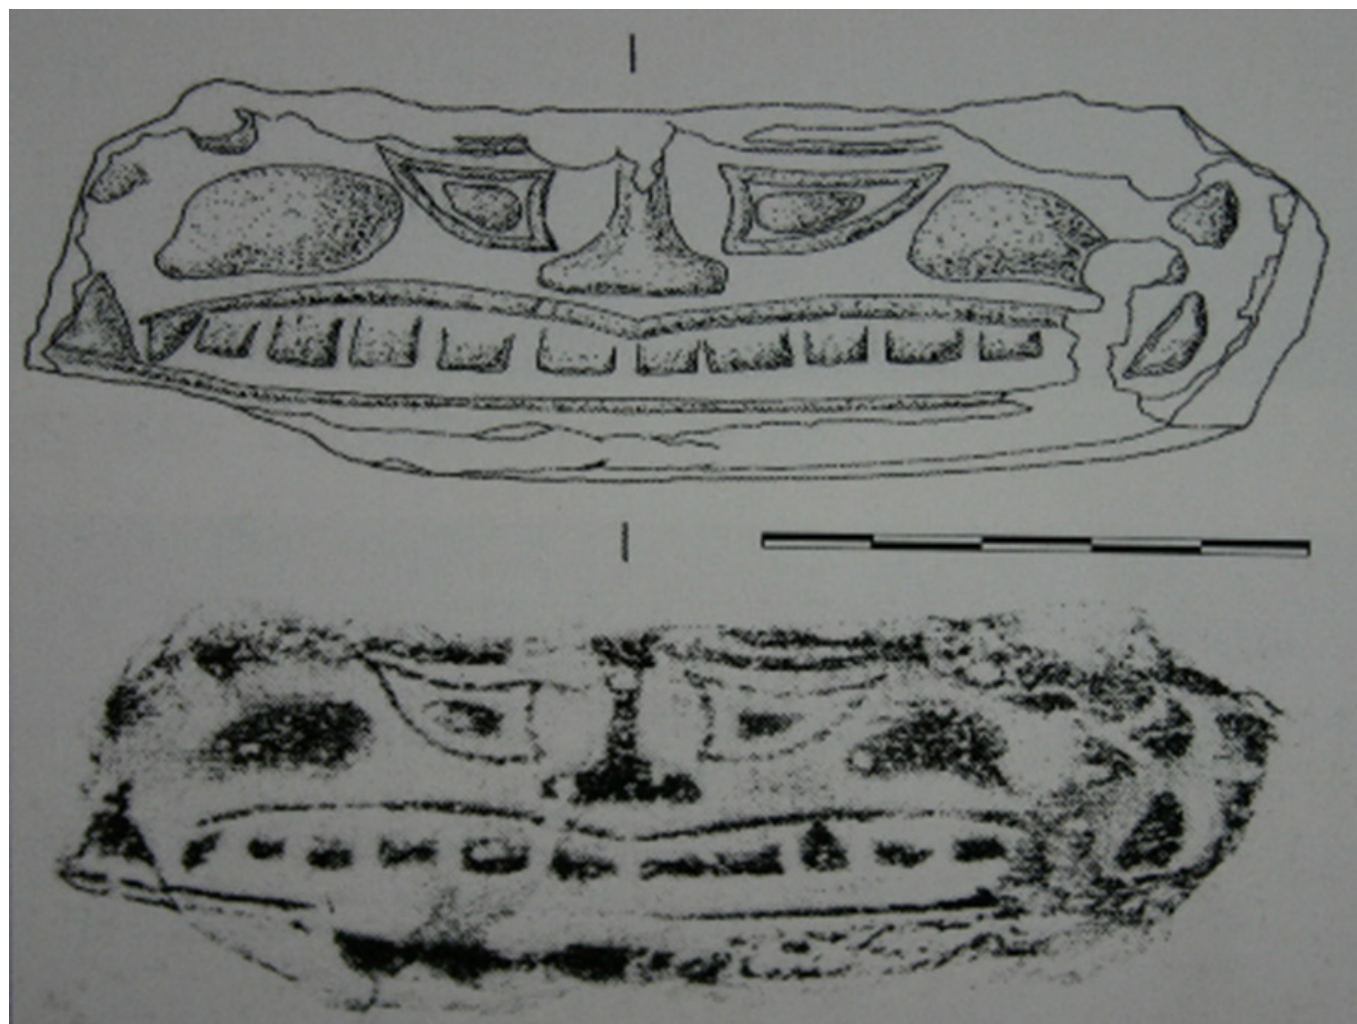

Figure 1

The skull of *Protheridium* sp. is characterized by its elongated shape and the presence of a central opening in the snout. The eyes are large and rounded, and the mouth is wide with a row of small, sharp teeth. The skull is shown in dorsal view.
