Q. ...

A. 3D printing (3D printing) is a process of creating three-dimensional objects from a digital file. It involves the use of various technologies, including Robotics, AI, Deep learning, and Self-driving car. The process is highly automated and can produce complex shapes and structures. It is used in various industries, including manufacturing, healthcare, and education. The process is highly efficient and can produce parts that are difficult to create using traditional manufacturing methods. It is also used for prototyping and creating custom parts. The process is highly flexible and can be used to create a wide range of objects, from simple parts to complex structures. It is a highly versatile technology that is revolutionizing the manufacturing industry.
